

# Utility & Pocket Knives

## parts and use

1. a blade of a utility knife can be **retracted** or **extended**
  1. to retract - to draw back , pull back , withdraw , take back
  2. to extend - to spread , to stretch forth , unbend , push forward
2. We open or unfold a **folding knife** . Also you can **flip** it **open** . When we **flip** a knife the **blade** is **released** .
3. to **open** and **close** a knife
4. How well can a knife **secure** (lock in the position ) the blade ?
5. Some knives have a **liner lock** ( locking liner ) to secure the blade in the **open position** .
6. A **thumb pad** is a thumb support on a handle of a knife .
7. In order to change a blade on some knives you have to remove a blade **retention screw** .
8. **Press & Flip** mechanism
9. One handed opening
10. Quick one handed operation
11. One handed flip-open design allows to open a knife with **the flick of a wrist** .
12. Some manufacturers use a lock back to secure the blade in the open position
13. Some knives have their blade set loosely on the pivot so the knife partly opens itself with the **help of gravity** when turned blade-down .
14. The DeWalt knife is extremely stiff in the closed position
15. A blade release button
16. The blade release button of this knife must be in the **recessed position** to extract the blade
17. Some knives have a belt clip or pocket clip while others don't
18. Blade deployment process
19. On some knives a belt clip is tucked away to avoid discomfort for the hand
20. However, it still fastens to the belt well enough
